SUMMARY

Data Engineer with ~2–3 years of experience working on cloud-based data pipelines and backend services using AWS and Java-based micro services. Experienced in supporting ETL workflows, optimizing SQL queries, and developing REST APIs using Spring Boot. Familiar with CI/CD pipelines, containerized deployments, and cloud infrastructure in Agile engineering environments.

EXPERIENCE

PRC Cloud Tech, USA | Data Engineer **Jan 2026 – Present**

- Contribute to development and maintenance of AWS-based data pipelines used for ingesting operational datasets and preparing them for analytics workloads. Support ongoing improvements to pipeline reliability and monitoring processes.
- Assist in implementing ETL workflows that transform and load structured data into relational databases, ensuring consistency and usability for reporting teams.
- Write and optimize SQL queries used by internal dashboards and reporting tools, helping improve query performance and maintain accurate data retrieval.
- Work with backend services that integrate AWS components such as Lambda, API Gateway, and RDS while assisting engineers in troubleshooting data processing issues.
- Participate in code reviews and collaborate with team members to debug pipeline failures, improving overall stability of scheduled data workflows.

Tech Force, USA | Data Engineer **Sep 2025 – Jan 2026**

- Supported development of cloud-based data pipelines built on AWS services to process operational and transactional datasets used across internal systems.
- Assisted in configuring CI/CD pipelines using Jenkins and Docker to automate build and deployment processes for backend services.
- Improved database performance by analyzing PostgreSQL and Oracle queries, adding indexes and tuning SQL statements for better execution time.
- Monitored production pipelines and helped investigate data quality issues, ensuring that downstream systems received accurate and consistent datasets.

Infosys Now, USA | Data Engineer **Apr 2025 – Sep 2025**

- Worked on Spring Boot micro services integrated with AWS EC2, S3, and RDS that supported ingestion and processing of incoming application data.
- Assisted in building backend services used for ingesting and processing structured datasets while supporting data flow between services.
- Performed data validation checks and monitoring tasks to identify missing or inconsistent records in processed datasets.
- Documented service configurations and data workflow steps to help maintain knowledge sharing and easier troubleshooting for the engineering team.

DBS Technologies, India | Java Full Stack Developer **Jul 2022 – May 2023**

- Developed application features using Angular for frontend interfaces while supporting backend services built with Spring Boot.
- Implemented REST APIs that handled application requests and database operations, supporting business functionality and user workflows.
- Assisted in deploying application components on AWS infrastructure including EC2, S3, and RDS for staging and production environments.
- Contributed to CI/CD automation using Jenkins and Docker while participating in agile development cycles including sprint planning and code reviews.

SKILLS

Programming & Scripting: Java, Python, SQL, JavaScript, Typescript
Frameworks & Tools: Spring Boot, Angular, Hibernate (JPA), RxJS
Data Engineering: ETL Workflows, Data Processing, Data Validation, SQL Optimization
Cloud Platforms: AWS (EC2, S3, RDS, Lambda, API Gateway)
DevOps & CI/CD: Docker, Jenkins, Terraform, CI/CD Pipelines
Databases: PostgreSQL, Oracle, MariaDB
Architecture & APIs: REST APIs, Micro services Architecture, OAuth2, JWT, Spring Security
Testing: JUnit, Mockito, Selenium

EDUCATION

Master of Science in Data Engineering | **University of North Texas, Denton, TX** **Dec 2024**

CERTIFICATIONS

Aws Certified Data Engineer - Associate
Oracle Certified Professional: Java SE 17 Developer
